New FamoPouch Modular Storage System

The Concept:

Laminated see through pouches are a commonly used packing method in CSSD's world wide. The variation in size makes it hard to store it in a nice, efficient and hygienic way.

"**F**amo**P**ouch" has been specially designed for this purpose.

The storage frame can be attached underneath a worktop to which all different sizes of stainless steel trays can be attached. The trays are adapted to the sizes of the different pouches and can be placed to the requirements of the user. This gives a most flexible and efficient way to store your pouches. The worktop stays empty and all pouches are within reach of the user. The trays itself make sure that all sizes stick together without getting mixed up with other sizes.

Famos also designed a storage frame which can be hung onto the upright partition of the worktable, the wall brackets with hooks and/or on our transport and storage trolleys with hooks for a mobile solution.

Every tray has a slanted back which makes it easy to grab a single pouch. The back of the tray is provided with holes to prevent accumulation of dust and particles.

Every tray is made of stainless steel and is designed to easily remove them from the storage frame so they can easily be washed and disinfected in an automatic washer-disinfector.

If your requested product is not in our standard assortment, feel free to contact us and we will make it to your custom requirements
