FamoStorage

Perfection into Every Detail

The Concept:

Sterilization containers are heavy items to store, transport and handle within the CSSD and OR environment. Most of the time they are stored in a shelving system with solid shelves or wire shelves.

No matter which storage and transport system you use, there is a large risk of the Aluminium containers sliding over stainless steel or plastic shelves, creating heavy friction handling and damage to your storage system, sterilization containers and in worst case scenario "Particles".

In conjunction with a large University Medical Centre in the Netherlands, Famos have created a modular system that negates all these effects.

A combination of a stainless steel shelf, solid or perforated, integrated with easily manoeuvrable roller wheels that transport your sterilization container, is the result of the consultation.

This system of shelving can be integrated in the Belintra UbeFlex and the Hupfer shelving system or in our own FamoStorage shelving system.

For transportation solutions, Famos have created a version which can be maneuvered in standard U-profiles in your open or closed transport trolleys. Even the implementation in your Modular closed cabinets is possible.

The Container shelves come in 2 sizes:

600x300mm DxW

600x400mm DxW

And 2 versions:

Shelving system for Belintra, Hupfer or Famos systems.

Mobile/Cabinet system for integration in U-profiles and cabinet liners.

For more information contact our office or your Famos contact.

If your requested product is not in our standard range, feel free to contact us and together we will find a solution.
